2	Indices and tables	17
Ру	ython Module Index	19
In	dex	21

Example implementations of the practice and challenge projects in Impractical Python Projects. Alternative answers to practice projects and supporting files can be found at the official GitHub page.

It's a fantastic intermediate level book that has truly impractical (but fun) projects. It's a great way to get tricked into learning new conventions, techniques, and modules.

My original python-tutorials repository is already very nested, so these will be easier to find and review here; however, the original repository still has relevant information about configuring a Python environment/IDE.

Bonus content includes Google style docstrings (such wow), main functions (so standard), pip requirements files (so helpful), and test files (**not** punny at all).

MODULE REFERENCE 1

2 MODULE REFERENCE

**CHAPTER** 

# ONE

# SRC

# 1.1 src package

# 1.1.1 Subpackages

src.ch01 package

**Subpackages** 

src.ch01.challenge package

#### **Submodules**

# src.ch01.challenge.c1\_foreign\_bar\_chart module

Return letter 'bar chart' of a non-English sentence.

```
src.ch01.challenge.c1\_foreign\_bar\_chart.add\_keys\_to\_dict (dictionary: dict) \rightarrow dict
Add keys to dictionary.
```

Check keys of a letter dictionary and add missing letters.

**Parameters dictionary** (dict) – Dictionary to check keys of.

**Returns** Dictionary with string.ascii\_lowercase as keys.

Raises TypeError – If dictionary is not a dict.

```
src.ch01.challenge.cl_foreign_bar_chart.foreign_freq_analysis(sentence: str) <math>\rightarrow dict
```

Wrap freq\_analysis and add\_keys\_to\_dict.

Passes given sentence through freq\_analysis() then add\_keys\_to\_dict() to fill in missing keys.

**Parameters** sentence (str) – String to count letters of.

**Returns** Dictionary with string.ascii\_lowercase as keys and a list with letters repeated based on their frequency as values.

```
src.ch01.challenge.cl_foreign_bar_chart.main()
    Demonstrates the Foreign Bar Chart.
```

### src.ch01.challenge.c2\_name\_generator module

Generate pseudo-random names from a list of names.

```
src.ch01.challenge.c2_name_generator.add_name_to_key (name: str, dictionary: dict, key: str) \rightarrow None
```

Add name to key in dictionary.

Add name to dictionary under key if not already present.

#### **Parameters**

- name (str) Name to add to dictionary.
- **key** (str) Key to add **name** under.
- **dictionary** (*dict*) Dictionary to add **name** to.

Returns None. name is added under key if not present, dictionary is unchanged otherwise.

Raises TypeError – If name and key aren't str or if dictionary isn't a dict.

```
src.ch01.challenge.c2\_name\_generator.build\_name\_list (folderpath: str) <math>\rightarrow list Build name list from folder.
```

Builds list of names from name files in given folder.

**Parameters** folderpath (str) – Path to folder with name files.

**Returns** List with names from **folderpath**.

Raises IndexError – If folderpath has no .txt files.

```
src.ch01.challenge.c2\_name\_generator.generate\_name (name\_dict: dict) \rightarrow str
Generate pseudo-random name.
```

Use names in dictionary to generate a random name.

```
Parameters name_dict - Dictionary from split_names().
```

**Returns** String with a random name.

**Raises KeyError** – If there aren't three keys in the dictionary.

**Note:** Only add middle name between 1/3 and 1/4 of the time.

```
src.ch01.challenge.c2_name_generator.main()
    Demonstrate name generator.
```

```
\label{eq:src.ch01.challenge.c2_name_generator.name_generator} (\textit{folderpath: str}) \rightarrow \textit{str} \\ \text{Wrap generate\_name, split\_names, and build\_name\_list.}
```

Passes given **folderpath** through <code>build\_name\_list()</code> to get the names in a <code>list</code>, then <code>split\_names()</code> to split them into a <code>dict</code>, and finally through <code>generate\_name()</code> to make the actual name.

**Parameters** folderpath (str) – Path to folder with name files.

**Returns** String with pseudo-random name.

```
src.ch01.challenge.c2\_name\_generator.read\_from\_file(filepath: str) \rightarrow list Read from file.
```

Reads lines from text file and returns a list.

**Parameters filepath** (str) – Path to file with names.

**Returns** List with each line from the file as an element.

**Note:** Removes trailing whitespaces.

```
src.ch01.challenge.c2_name_generator.split_names (name\_list: list) \rightarrow dict Split names from list of names.
```

Splits first, middle, and last names from a given list of names.

**Parameters** name\_list (list) - List with names as elements.

Returns Dictionary of lists with first, middle, and last as keys and names as values.

Raises

- **TypeError** If given name list is not a list or tuple.
- ValueError If given name list is empty.

**Note:** Drops suffix and adds nickname to middle names.

#### **Module contents**

```
Chapter 1 Challenge Projects.
src.ch01.challenge.ADD_KEYS_ERROR
    String with TypeError for add_keys_to_dict().
         Type str
src.ch01.challenge.SPLIT_NAME_LIST_ERROR
    String with TypeError for split_names().
         Type str
src.ch01.challenge.SPLIT_NAME_EMPTY_ERROR
    Sting with ValueError for split names ().
         Type str
src.ch01.challenge.ADD_NAME_TO_KEY_ERROR
    String with TypeError for add_name_to_key().
         Type str
src.ch01.challenge.GENERATE_NAME_ERROR
    String with KeyError for generate_name().
         Type str
src.ch01.challenge.BUILD_LIST_ERROR
    String with IndexError for build_name_list().
         Type str
```

#### src.ch01.practice package

#### **Submodules**

#### src.ch01.practice.p1\_pig\_latin module

Takes a word as input and returns its Pig Latin equivalent.

```
src.ch01.practice.pl_pig_latin.encode (word: str) \rightarrow str Check if word starts with vowel, then translate to Pig Latin.
```

If a word begins with a consonant, move the consonant to the end of the word and add 'ay' to the end of the new word. If a word begins with a vowel in *VOWELS*, add 'way' to the end of the word.

**Parameters word** (str) – Word to encode to Pig Latin.

Returns Encoded Pig Latin word.

Raises TypeError – If word is not a string.

```
src.ch01.practice.p1_pig_latin.main()
    Demonstrate Pig Latin encoder.
```

### src.ch01.practice.p2 poor bar chart module

Takes a sentence as input and returns a 'bar chart' of each letter.

```
src.ch01.practice.p2\_poor\_bar\_chart.freq\_analysis (sentence: str) \rightarrow dict Perform frequency analysis of letters in sentence.
```

Iterate through each letter in the sentence and add it to a dictionary of lists using collections. default.dict.

**Parameters** sentence (str) – String to count letters of.

**Returns** defaultdict with each letter as keys and a list with letters repeated based on their frequency as values.

#### **Example**

**Raises** TypeError – If sentence is not a string.

```
src.ch01.practice.p2_poor_bar_chart.main()
    Demonstrates the Poor Bar Chart.
src.ch01.practice.p2_poor_bar_chart.print_bar_chart (freq_dict: dict) → None
    Print dictionary to terminal.

Use pprint.pprint() to print dictionary with letter frequency analysis to terminal.
```

analysis

from

frequency

```
freq_analysis().
          Returns None. Prints freq_dict.
          Raises TypeError – If freq_dict is not a dictionary.
Module contents
Chapter 1 Practice Projects.
src.ch01.practice.VOWELS
     Tuple containing characters of the English vowels (except for 'y')
          Type tuple
src.ch01.practice.ENCODE_ERROR
     String with TypeError for Pig Latin encode ().
          Type str
src.ch01.practice.FREQ_ANALYSIS_ERROR
     String with TypeError for Poor Bar Chart freq_analysis().
          Type str
src.ch01.practice.PRINT_BAR_CHART_ERROR
     String with TypeError for Poor Bar Chart print bar chart ().
          Type str
Module contents
Chapter 1.
src.ch02 package
Submodules
src.ch02.c1 recursive palindrome module
Recursively determine if a word is a palindrome.
src.ch02.c1\_recursive\_palindrome.main(word: str = None) \rightarrow None
     Demonstrate the recursive palindrome tester.
     This is only supposed to be a demo, but coverage necessitates excessiveness.
          Parameters word (str) – Word to test if it is a palindrome.
          Returns None. Identifies word as a palindrome.
src.ch02.c1_recursive_palindrome.recursive_ispalindrome(word: str) \rightarrow bool
     Recursively check if a word is a palindrome.
          Parameters word (str) – String to check palindromeness.
          Returns True if the word is a palindrome, False otherwise.
          Raises TypeError – If word is not a string.
```

(dict) -

Dictionary

with

Parameters freq\_dict

## src.ch02.p1\_cleanup\_dictionary module

Cleanup word dictionary.

Various functions for cleaning up a word dictionary.

src.ch02.p1\_cleanup\_dictionary.APPROVED\_WORDS

Words that should always appear in a word dictionary.

Type list

 $src.ch02.p1\_cleanup\_dictionary.cleanup\_dict(filepath: str) \rightarrow list$  Wrap read\_from\_file and cleanup\_list.

Passes given **filepath** through <code>read\_from\_file()</code> to get a list of words, then <code>cleanup\_list()</code> to remove single letter words.

**Parameters filepath** (str) – String with path to word dictionary file.

**Returns** List with words as elements excluding single letter words.

 $\verb|src.ch02.p1_cleanup_dictionary.cleanup_list| (word\_list: list) \rightarrow list| Cleanup| word| list.$ 

Remove single letter words from a list of words.

**Parameters word\_list** (list) – List with words as elements.

**Returns** List with words as elements excluding single letter words.

**Raises** IndexError – If word\_list is empty.

 $src.ch02.p1\_cleanup\_dictionary.cleanup\_list\_more (word\_list: list) \rightarrow list$  Cleanup word list even more.

First, remove words with apostrophes, double letter words, duplicates, and words with letters not in string. ascii\_lowercase from a list of words. Then, add <code>APPROVED\_WORDS</code> back into list. Finally, sort list.

**Parameters word\_list** (list) – List with words as elements.

**Returns** Sorted list with words as elements excluding cleaned words and APPROVED\_WORDS added.

Raises IndexError – If word\_list is empty.

src.ch02.p1\_cleanup\_dictionary.main()
 Demonstrate cleanup dictionary.

#### Module contents

```
Chapter 2.
```

```
src.ch02.DICTIONARY_FILE_PATH
```

String with path to Ubuntu 18.04.2's American English dictionary file.

Type str

```
src.ch02.CLEANUP LIST ERROR
```

String with IndexError for Cleanup Dictionary cleanup\_list().

Type str

#### src.ch02.RECURSIVE ISPALINDROME ERROR

String with TypeError for Recursive Palindrome recursive\_ispalindrome().

Type str

#### src.ch03 package

#### **Submodules**

# src.ch03.c1 anagram generator module

Generate phrase anagrams from a word or phrase.

```
src.ch03.c1\_anagram\_generator.anagram\_generator(word: str) \rightarrow list Generate phrase anagrams.
```

Make phrase anagrams from a given word or phrase.

**Parameters word** (str) – Word to get phrase anagrams of.

**Returns** list of phrase anagrams of word.

Adds words from given word list to a given anagram dictionary.

#### **Parameters**

- word\_list (list) List of words to add to anagram dictionary.
- **dictionary** (*dict*) Anagram dictionary to add words to.

**Returns** None. If words in **word\_list** are in **dictionary** they are not added. Otherwise, they are added.

```
src.ch03.c1_anagram_generator.find_anagram_phrases (phrases: list, word: str, anagram_dict: dict, phrase: list) \rightarrow None
```

Find anagram phrases.

Recursively finds an agram phrases of **word** by removing unusable words from the **anagram\_dict**, finding remaining an agrams given the **phrase**, then adding any found an agram phrases to **phrases**.

#### **Parameters**

- phrases (list) List of anagram phrases.
- word (str) Current word to find anagram phrases of.
- anagram\_dict (dict) Current anagram dictionary to find anagrams with.
- **phrase** (list) Current anagram phrase candidate.

**Returns** None. **phrases** is updated with any found anagram phrases.

 $src.ch03.c1\_anagram\_generator.find\_anagrams$  (word: str, anagram\\_dict: dict)  $\rightarrow$  list Find anagrams in word.

Find all anagrams in a given word (or phrase) using anagram dictionary.

### **Parameters**

• word (str) – Word to find anagrams of.

• anagram\_dict - Dictionary from get\_anagram\_dict().

**Returns** list of str with all anagrams in word.

 $src.ch03.c1\_anagram\_generator.get\_anagram\_dict(word\_list: list) \rightarrow dict$ Get an anagram dictionary from word\_list.

Get the ID of each word in word list and add it to a dictionary with the ID as the key.

**Parameters word\_list** (list) – List of words to make into anagram dictionary.

**Returns** defaultdict of list with an ID (int) as the key and words whose product of letters equal that ID as values.

```
src.ch03.c1\_anagram\_generator.get\_id(word: str) \rightarrow int Get ID number of word.
```

Assign a unique prime number to each letter in ascii\_lowercase. The product of each letter in word is its ID number.

**Parameters** word (str) – Word to get ID of.

Returns int representing ID of word.

```
src.ch03.c1_anagram_generator.get_primes (length: int = 26, min_prime: int = 2, max_prime: int = 101) \rightarrow list Get list of primes.
```

Given a length, minimum, and maximum prime number, return a list of prime numbers.

#### **Parameters**

- length (int) Number of prime numbers to return. Defaults to 26.
- min\_prime (int) Smallest prime number to return. Defaults to 2.
- max\_prime (int) Largest prime number to return. Defaults to 101.

**Returns** list of **length** prime numbers with **min\_prime** as the smallest prime number and **max\_prime** as the largest prime number in the list.

```
src.ch03.c1_anagram_generator.main()
```

Demonstrate the Anagram Generator.

 $\verb|src.ch03.c1_anagram_generator.multi_get_anagram_dict| (word\_list: list) \rightarrow dict \\ Multithreaded get anagram dictionary.$ 

Uses os.cpu\_count() and threading. Thread to use all CPUs to make an anagram dictionary with the intent of being more efficient than  $get\_anagram\_dict()$ .

**Parameters word\_list** (list) - List of words to make into anagram dictionary.

**Returns** defaultdict of list with an ID (int) as the key and words whose product of letters equal that ID as values.

**Warning:** Avoids race conditions by heavily relying on CPython's Global Interpreter Lock. More info about Thread Objects.

```
src.ch03.c1\_anagram\_generator.remove\_unusable\_words (anagram\_dict: dict, usable\_letters: list) <math>\rightarrow dict
```

Remove unusable words from anagram dictionary.

Creates new anagram dictionary by including only IDs that can be IN usable\_letters.

# **Parameters**

- anagram\_dict (dict) Anagram dictionary to prune.
- usable letters (list) List of letters that must be used.

**Returns** defaultdict of list with an ID (int) as the key and words whose product of letters equal that ID as values.

```
src.ch03.c1_anagram_generator.split (a\_list: list, parts: int) \rightarrow list Split a list into parts.
```

Split given list into given number of parts.

#### **Parameters**

- a\_list (list) List to split.
- parts (int) Number of parts to split list into.

**Returns** List of lists with a\_list split into parts.

### **Example**

```
>>> import src.ch03.c1_anagram_generator.split as split
>>> some_list = ['this', 'is', 'a', 'list']
>>> split_list = split(some_list, 2)
>>> print(split_list)
[['this', 'is'], ['a', 'list']]
```

#### src.ch03.p1 digram counter module

Counts the occurrence of all possible digrams of a word in a dictionary.

```
src.ch03.p1\_digram\_counter.count\_digrams (digrams: set, dict\_list: list) \rightarrow dict
Count digrams in word dictionary.
```

Count frequency of each digram in the set in a word dictionary list.

#### **Parameters**

- digrams (set) Set of digrams to count frequency of.
- dict\_list (list) Word dictionary list.

**Returns** Counter with digrams as keys and their counts as values.

Raises TypeError – If digrams isn't a set or if dict\_list isn't a list.

```
src.ch03.p1_digram_counter.digram_counter(word: str, dict_file: str = '/usr/share/dict/american-english') \rightarrow dict
```

 $Wrap\ get\_digrams,\ count\_digrams,\ and\ read\_from\_file.$ 

Send word through <code>get\_digrams()</code> to get a set of digrams which is then passed through <code>count\_digrams()</code> along with the list made by passing <code>dict\_file</code> through <code>read\_from\_file()</code>.

# **Parameters**

- word (str) Word to get digrams of.
- dict\_file (str) Path of dictionary file to get a frequency analysis of each digram. Defaults to DICTIONARY\_FILE\_PATH.

**Returns** Counter with digrams as keys and their counts as values.

```
src.ch03.p1_digram_counter.get_digrams (word: str) → set
     Get a set of digrams given a word.
     Generate all possible digrams of a given word.
          Parameters word (str) – String to get digrams of.
          Returns set of all possible digrams of the given word.
          Raises TypeError – If word isn't a string.
src.ch03.p1_digram_counter.main()
     Demonstrate the digram counter.
Module contents
Chapter 3.
src.ch03.GET_DIGRAMS_ERROR
     String with TypeError for get_digrams().
          Type str
src.ch03.COUNT_DIGRAMS_ERROR
     String with TypeError for count_digrams().
          Type str
src.ch04 package
Subpackages
src.ch04.practice package
Submodules
src.ch04.practice.p1 hack lincoln module
Hack route cipher sent by Abraham Lincoln.
src.ch04.practice.p1\_hack\_lincoln.decode\_route (keys: list, cipherlist: list) \rightarrow list
     Decode route cipher.
     Decode cipherlist encoded with a route cipher using keys.
          Parameters
                • keys (list) – List of signed, integer keys.
                • cipherlist (list) – List of strings representing encoded message.
          Returns List of strings representing plaintext message.
     Note: Assumes vertical encoding route.
```

```
src.ch04.practice.pl_hack_lincoln.get_factors (integer: int) \rightarrow list Get factors of integer.
```

Calculate factors of a given integer.

**Parameters** integer (int) – Number to get factors of.

**Returns** List of integer factors of **integer**.

```
src.ch04.practice.pl_hack_lincoln.hack_route (ciphertext: str) \rightarrow None Hack route cipher.
```

Hack route cipher by using get\_factors () to find all possible key lengths. Then use keygen () to generate all possible keys and pass each one through decode\_route().

**Parameters** ciphertext (str) – Message encoded with route cipher.

Returns None. Prints all possible decoded messages.

```
src.ch04.practice.pl_hack_lincoln.keygen (length: int) \rightarrow list Generate all possible route cipher keys.
```

Generates a list of all possible route cipher keys of **length**.

**Parameters** length (int) – Length of route cipher key.

**Returns** List of lists of integers representing all possible route cipher keys of **length**.

### **Example**

```
>>> from src.ch04.practice.pl_hack_lincoln import keygen
>>> keygen(2)
[[-1, -2], [-1, 2], [1, -2], [1, 2]]
```

```
src.ch04.practice.pl_hack_lincoln.main()
```

Demonstrate hack of Lincoln's route cipher.

### src.ch04.practice.p2\_identify\_cipher module

Identify letter transposition or substitution cipher.

```
src.ch04.practice.p2\_identify\_cipher.identify\_cipher(ciphertext: str, threshold: float) \rightarrow bool
```

Identify letter transposition or substitution cipher.

Compare most frequent letters in **ciphertext** with the most frequent letters in the English alphabet. If above **threshold**, it is a letter transposition cipher. If not, it is a letter substitution cipher.

# Parameters

- **ciphertext** (*str*) Encrypted message to identify.
- **threshold** (*float*) Percent match in decimal form.

**Returns** True if the **ciphertext** is a letter transposition cipher. False otherwise.

```
src.ch04.practice.p2\_identify\_cipher.is\_substitution (ciphertext: str) \rightarrow bool Identify letter substitution cipher.
```

Wrapper for identify\_cipher(). threshold defaults to 0.45.

**Parameters** ciphertext (str) – Encrypted message to identify.

**Returns** True if the **ciphertext** is a letter substitution cipher. False otherwise.

src.ch04.practice.p2\_identify\_cipher.is\_transposition(ciphertext: str) → bool Identify letter transposition cipher.

Wrapper for identify\_cipher(). threshold defaults to 0.75.

**Parameters** ciphertext (str) – Encrypted message to identify.

**Returns** True if the **ciphertext** is a letter transposition cipher. False otherwise.

 $src.ch04.practice.p2\_identify\_cipher.main(ciphertext: str = None) \rightarrow None$ Demonstrate the cipher identifier.

This is only supposed to be a demo, but coverage necessitates excessiveness.

**Parameters** ciphertext (str) – Encrypted letter transposition or letter substitution cipher to demonstrate.

Returns None. Identifies ciphertext's cipher.

# src.ch04.practice.p2 identify cipher deco module

Identify letter transposition or substitution cipher using decorator.

**Note:** Not part of the book, I was just curious about decorators and decided to tinker with them a bit.

```
src.ch04.practice.p2_identify_cipher_deco.identify(threshold: float = 0.5)
     Make decorator for identify_cipher.
```

Decorator factory to replace a decorated function with identify\_cipher(). A bit like going around the world to reach the teleporter across the street, but at import time instead of runtime, so it doesn't matter.

Luciano Ramalho's book *Fluent Python* appropriately calls decorators "syntactic sugar" when they aren't used in classes. It also references the wrapt module's blog on GitHub for a deeper explanation of decorators.

Not sure what a decorator factory would be called...syntactic caramel?

**Parameters** threshold (float) – Percent match in decimal form.

Returns Whatever the output of identify\_cipher() would be given the decorated function's

 $src.ch04.practice.p2\_identify\_cipher\_deco.is\_substitution(ciphertext: str) \rightarrow bool$ Identify letter substitution cipher.

Empty function to wrap with identify\_cipher() using identify(). threshold defaults to 0.45.

**Parameters** ciphertext (str) – Encrypted message to identify.

**Returns** True if the **ciphertext** is a letter substitution cipher. False otherwise.

```
src.ch04.practice.p2_identify_cipher_deco.is_transposition(ciphertext:
```

Identify letter transposition cipher.

Empty function to wrap with identify\_cipher() using identify(). threshold defaults to 0.75.

**Parameters** ciphertext (str) – Encrypted message to identify.

**Returns** True if the **ciphertext** is a letter transposition cipher. False otherwise.

## src.ch04.practice.p3\_get\_keys module

Get route cipher key from user and store as dictionary.

**Note:** Assumes vertical cipher routes.

```
src.ch04.practice.p3_get_keys.get_keys() \rightarrow list Get route cipher keys from user.
```

User only has to enter positive/negative integers. Each gets added to a list and returned when the user has no other keys to add.

**Returns** List of integers as column numbers and positive/negative values as route direction.

```
src.ch04.practice.p3\_get\_keys.key\_to\_dict(keys: list) \rightarrow dict
Convert route cipher key to dictionary.
```

Take a route cipher key in list format where integers are column numbers and positive/negative is the route direction and convert to a dictionary where the column numbers are keys and the route direction as up/down are the values.

**Parameters** keys (list) – List of integers with direction as positive/negative.

Returns Integers keys and up/down as values.

```
src.ch04.practice.p3_get_keys.main()
```

Demonstrate getting route cipher keys from the user.

#### src.ch04.practice.p4 generate keys module

Generate route cipher keys for brute-forcing a route cipher.

Already implemented with *keygen()*, but this version will return a list of tuples.

```
\verb|src.ch04.practice.p4_generate_keys.generate_keys| (\textit{length: int}) \rightarrow list \\ Generate all possible route cipher keys.
```

Generates a list of all possible route cipher keys of length.

**Parameters** length (int) – Length of route cipher key.

**Returns** List of tuples of integers representing all possible route cipher keys of **length**.

```
src.ch04.practice.p4_generate_keys.main()
    Demonstrate the key generator.
```

# src.ch04.practice.p5 hack route module

Another way to hack a route cipher.

Already implemented in  $p1\_hack\_lincoln$ , but this version will use the building blocks made in  $p2\_identify\_cipher$ ,  $p3\_get\_keys$ , and  $p4\_generate\_keys$ .

```
src.ch04.practice.p5\_hack\_route.decode\_route (keys: dict, cipherlist: list) \rightarrow list Decode route cipher.
```

Decode cipherlist encoded with a route cipher using keys.

**Parameters** 

- **keys** (dict) up/down dictionary with column numbers as keys.
- cipherlist (list) List of strings representing encoded message.

**Returns** List of strings representing plaintext message.

**Note:** Assumes vertical encoding route.

```
src.ch04.practice.p5\_hack\_route.hack\_route (ciphertext: str, columns: int) \rightarrow None Hack route cipher using brute-force attack.
```

Determine if **ciphertext** is a transposition cipher. If so, use **columns** to generate all possible keys. Convert each key to an up/down dictionary for each route to take, then print the result of each key.

#### **Parameters**

- **ciphertext** (*str*) Route cipher encoded string to hack.
- columns (int) Number route cipher columns.

**Returns** None. Prints all possible decoded messages.

```
src.ch04.practice.p5_hack_route.main()
    Demonstrate the route cipher hacker.
```
